### **Problem symptoms table**

Before replacing or repairing air conditioning components, first determine if the malfunction is due to the refrigerant charge, air flow or compressor.

Use the table below to help you find the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

After correcting the malfunction, check the complete system to ensure that performance is satisfactory.

### **STANDARD:**

Symptom	Suspect Area
No blower operation	1.Blower fuse 2.Blower relay 3.Blower motor 4.Power mosfet 5.Blower speed control switch 6.Wire harness
No air temperature control	1.Engine coolant capacity     2.Heater control assembly
No compressor operation  (agazaa cuudous)	1.Refrigerant capacity 2.A/C Fuse 3.Magnetic clutch 4.Compressor 5.Dual pressure switch 6.A/C switch 7.Evaporator temperature sensor 8.Wire harness
No cool comes out	1.Refrigerant capacity 2.Refrigerant pressure 3.Drive belt 4.Magnetic clutch 5.Compressor 6.Dual pressure switch 7.Evaporator temperature sensor 8.A/C switch 9.Heater control assembly 10.Wire harness
Insufficient cooling	1.Refrigerant capacity 2.Drive belt 3.Magnetic clutch 4.Compressor 5.Condenser 6.Expansion valve 7.Evaporator 8.Refrigerant lines 9.Triple pressure switch 10.Heater control assembly
No engine idle-up when A/C switch ON	1.Engine ECM 2.Wire harness

# Heating, Ventilation, Air Conditioning

## Air conditioning System

#### Instructions

## When handling refrigerant

- R-134a liquid refrigerant is highly volatile. A drop on the skin of your hand could result in localized frostbite. When handling the refrigerant, be sure to wear gloves.
- It is standard practice to wear goggles or glasses to protect your eyes, and gloves to protect your hands. If the refrigerant splashes into your eyes, wash them with clean water immediately.
- 3. The R-134a container is highly pressurized. Never leave it in a hot place, and check that the storage temperature is below 52°C (126°F)
- An electronic leak detector should be used to check the system for refrigerant leakage. Bear in mind that the R-134a, upon coming into contact with flame, produces phosgene, a highly toxic gas.
- Use only recommended the lubricant for R-134a systems. If lubricants other than the recommended one used, system failure may occur.
- 6. PAG lubricant absorbs moisture from the atmosphere at a rapid rate, therefore the following precautions must be observed:
  - When removing refrigerant components from a vehicle, cap immediately the components to prevent from the entry of moisture.
  - When installing refrigerant components to a vehicle, do not remove the cap until just before connecting the components.
  - Complete the connection of all refrigerant tubes and hoses without delay to prevent the A/C system from taking on moisture.
  - Use the recommended lubricant from a sealed container only.

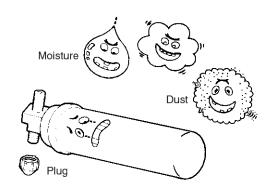

7. If an accidental discharge in the system occurs, ventilate the work area before resuming service.

LQAC003A

### When replacing parts ON A/C system

- 1. Never open or loosen a connection before discharging the system.
- 2. Seal the open fittings of components with a cap or plug immediately to prevent intrusion of moisture or dust.
- 3. Do not remove the sealing caps from a Replacement component until it is ready to be installed.
- 4. Before connecting an open fitting, always install a new sealing ring. Coat the fitting and seal with refrigerant oil before making the connection.

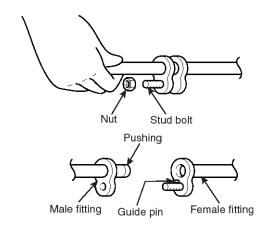

LQAC003B

## **HA-7**

# When installing connecting parts Flange with guide pin

Check the new O-ring for damage (use only the specified) and lubricate it using compressor oil. Tighten the nut to specified torque.

LQAC003C

	Tightening torque [ N.m (kg.m, lbf.ft) ]		
Size	General bolt, nut		
	4T	7T	
M6	5 - 6(0.5 - 0.6, 3.6 - 4.3)	9 - 11(0.9 - 1.1, 6.5 - 7.9	
M8	12 - 14(1.2 - 1.4, 8.7 - 1 0)	20 - 26(2.0 - 2.6, 14 - 18	
M10	25 - 28(2.5 - 2.8, 18 - 20 )	45 - 55(4.5 - 5.5, 32 - 39	
Size	Flange bolt, nut		
	4T	7T	
M6	5 - 7(0.5 - 0.7, 3.6 - 5.0)	8 - 12(0.8 - 1.2, 5.8 - 8.6	
M8	10 - 15(1.0 - 1.5, 7 - 10)	19 - 28(1.9 - 2.8, 14 - 20	
M10	21 - 31(2.1 - 3.1, 15 - 22	39 - 60(3.9 - 6.0, 28 - 43	

## MOTICE

T means tensile intensity, which is stamped on the head of bolt only numeral.

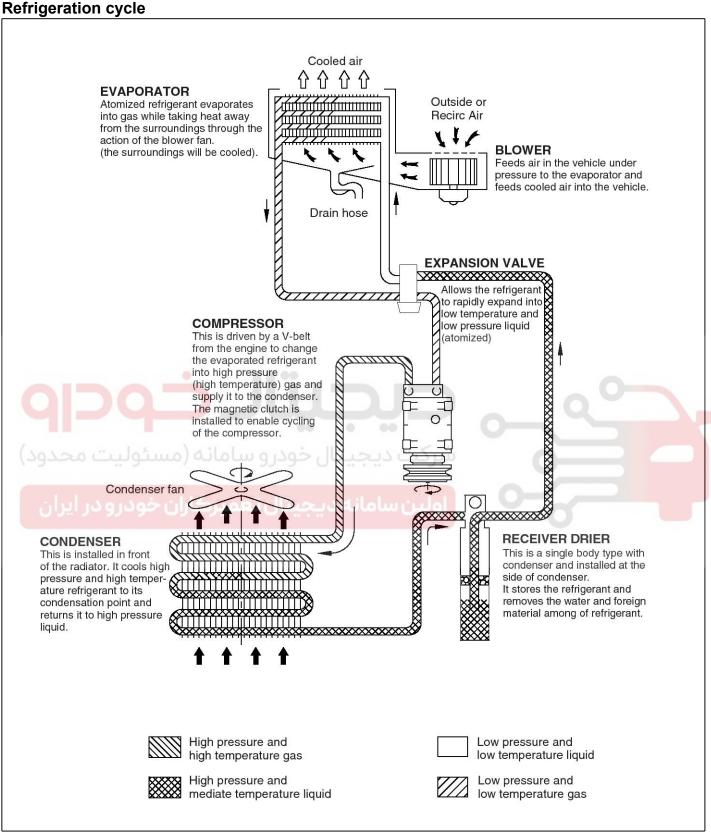

#### **Handling tubing and Fittings**

The internal parts of the refrigeration system will remain in a state of chemical stability as long as pure moisture-free refrigerant and refrigerant oil are used. Abnormal amounts of dirt, moisture or air can upset the chemical stability and cause problems or serious damage.

#### The following precautions must be observed

- When it is necessary to open the refrigeration system, have everything you will need to service the system ready so the system will not be left open any longer than necessary.
- 2. Cap or plug all lines and fittings as soon as they are opened to prevent the entrance of dirt and moisture.
- 3. All lines and components in parts stock should be capped or sealed until they are ready to be used.
- 4. Never attempt to rebind formed lines to fit. Use the correct line for the installation you are servicing.
- 5. All tools, including the refrigerant dispensing manifold, the gauge set manifold and test hoses, should be kept clean and dry.

# Heating, Ventilation, Air Conditioning

EQRF004A

## HA-9

## Refrigerant system service basics Refrigerant recovery

Use only service equipment that is U.L-listed and is certified to meet the requirements of SAE J2210 to remove HFC-134a(R-134a) from the air conditioning system.

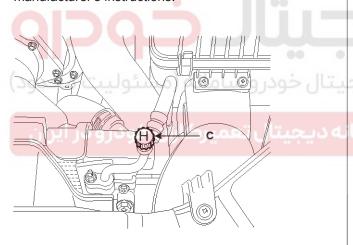

#### **ACAUTION**

- Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.
- Be careful when connecting service equipment.
- Do not breathe refrigerant or vapor.

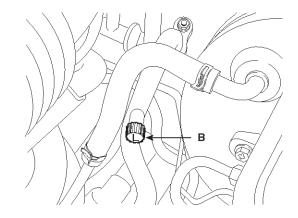

If accidental system discharge occurs, ventilate work area before resuming service.

Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.

 Connect an R-134a refrigerant Recovery/Recycling/Charging System (A) to the high-pressure service port (B) and the low-pressure service port (C) as shown, following the equipment manufacturer's instructions.

SHMHA7001D

SHMHA7002D

 Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to install the same amount of new refrigerant oil back into the A/C system before charging.

# Heating, Ventilation, Air Conditioning

#### System evacuation

Use only service equipment that is U.L-listed and is certified to meet the requirements of SAE J2210 to remove HFC-134a(R-134a) from the air conditioning system.

#### **ACAUTION**

- Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.
- Be careful when connecting service equipment.
- Do not breathe refrigerant or vapor.

If accidental system discharge occurs, ventilate work area before resuming service.

Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.

- When an A/C System has been opened to the atmosphere, such as during installation or repair, it must be evacuated using an R-134a refrigerant Recovery/Recycling/Charging System. (If the system has been open for several days, the receiver/dryer should be replaced, and the system should be evacuated for several hours.)
- Connect an R-134a refrigerant Recovery/Recycling/Charging System (A) to the high-pressure service port (B) and the low-pressure service port (C) as shown, following the equipment manufacturer's instructions.

Use only service equipment that is U.L-listed and is certified to meet the requirements of SAE J2210 to remove HFC-134a(R-134a) from the air conditioning system.

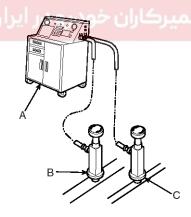

#### CAUTION

- Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.
- Be careful when connecting service equipment.
- Do not breathe refrigerant or vapor.

If accidental system discharge occurs, ventilate work area before resuming service.

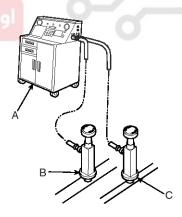

Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.

- When an A/C System has been opened to the atmosphere, such as during installation or repair, it must be evacuated using an R-134a refrigerant Recovery/Recycling/Charging System. (If the system has been open for several days, the receiver/dryer should be replaced, and the system should be evacuated for several hours.)
- 2. Connect an R-134a refrigerant Recovery/Recycling/Charging System (A) to the high-pressure service port (B) and the low-pressure service port (C) as shown, following the equipment manufacturer's instructions.

EQKE004A

- 3. If the low-pressure does not reach more than 93.3 kPa (700 mmHg, 27.6 in.Hg) in 10 minutes, there is probably a leak in the system. Partially charge the system, and check for leaks (see Leak Test.).
- 4. Remove the low pressure valve from the low-pressure service port.

EQKE004A

- 3. If the low-pressure does not reach more than 93.3 kPa (700 mmHg, 27.6 in.Hg) in 10 minutes, there is probably a leak in the system. Partially charge the system, and check for leaks (see Leak Test.).
- 4. Remove the low pressure valve from the low-pressure service port.

**HA-11** 

#### System charging

Use only service equipment that is U.L-listed and is certified to meet the requirements of SAE J2210 to remove HFC-134a(R-134a) from the air conditioning system.

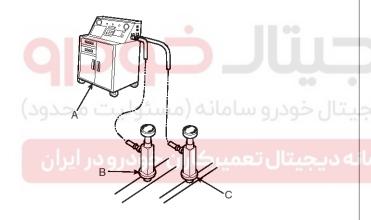

#### CAUTION

- Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.
- Be careful when connecting service equipment.
- Do not breathe refrigerant or vapor.

If accidental system discharge occurs, ventilate work area before resuming service.

Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.

 Connect an R-134a refrigerant Recovery/Recycling/Charging System (A) to the high-pressure service port (B) as shown, following the equipment manufacturer's instructions.

EQKE004A

2. Add the same amount of new refrigerant oil to system that was removed during recovery. Use only specified refrigerant oil. Charge the system with 18.0  $\pm$  0.88 oz. (510  $\pm$  25g) of R-134a refrigerant. Do not overcharge the system the compressor will be damaged.

#### Refrigerant leak test

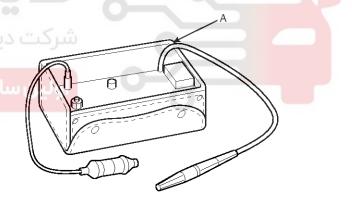

Always conduct a leak test with an electronic leak detector whenever leakage or refrigerant is suspected and when conducting service operations which are accompanied by disassembly or loosening or connection fittings.

#### MOTICE

In order to use the leak detector properly, read the manual supplied by the manufacturer.

If a gas leak is detected, proceed as follows:

- 1. Check the torque on the connection fittings and, if too loose, tighten to the proper torque. Check for gas leakage with a leak detector (A).
- If leakage continues even after the fitting has been tightened, discharge the refrigerant from the system, disconnect the fittings, and check their seating faces for damage. Always replace, even if the damage is slight.3. Check the compressor oil and add oil if required.
- 3. Charge the system and recheck for gas leaks. If no leaks are found, evacuate and charge the system again.

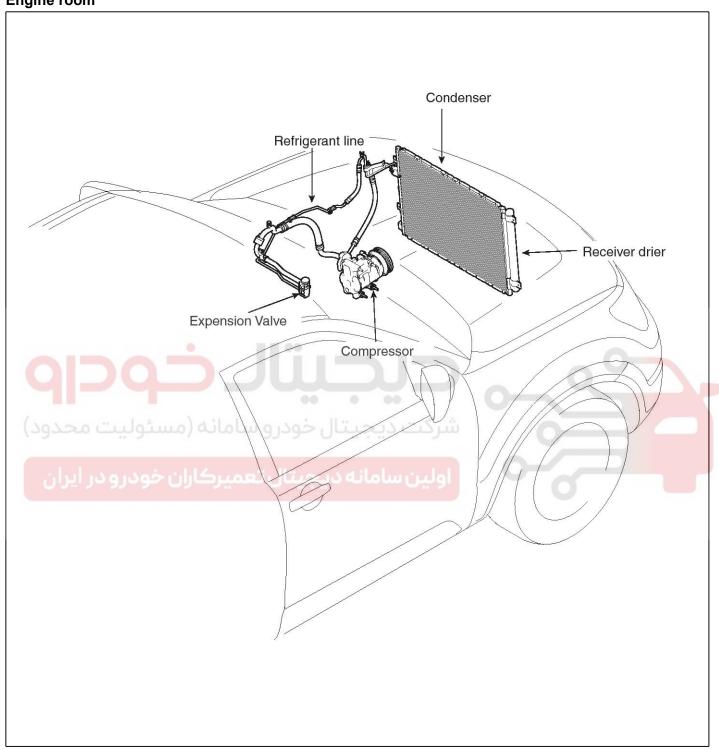

EQKE007A

SHMHA7003L

**HA-13** 

#### Interior

SHMHA7004L

# Heating, Ventilation, Air Conditioning

## Compressor oil

### Oil Specification

- The HFC-134a system requires synthetic (PAG) compressor oil whereas the R-12 system requires mineral compressor oil. The two oils must never be mixed.
- Compressor (PAG) oil varies according to compressor model. Be sure to use oil specified for the model of compressor.

### **Handling of Oil**

- 1. The oil should be free from moisture, dust, metal powder, etc.
- 2. Do not mix with other oil.
- The water content in the oil increases when exposed to the air. After use, seal oil from air immediately. (HFC-134a Compressor Oil absorbs moisture very easily.)
- 4. The compressor oil must be stored in steel containers, not in plastic containers.

#### Compressor oil check

The oil used to lubricate the compressor is circulating with the refrigerant.

Whenever replacing any component of the system or a large amount of gas leakage occurs, add oil to maintain the original amount of oil.

Oil total volume in system:

Front onlt : 150  $\pm$  10 Front & Rear : 210  $\pm$  10

#### Oil Return Operation

There is close affinity between the oil and the refrigerant.

During normal operation, part of the oil recirculates with the refrigerant in the system. When checking the amount of oil in the system, or replacing any component of the system, the compressor must be run in advance for oil return operation. The procedure is as follows:

- 1. Open all the doors and the engine hood.
- 2. Start the engine and air conditioning switch to "ON" and set the blower motor control knob at its highest position.
- 3. Run the compressor for more than 20 minutes between 800 and 1,000 rpm in order to operate the system.

4. Stop the engine.

#### **Replacement of Component Parts**

When replacing the system component parts, supply the following amount of oil to the component parts to be installed.

Component parts to be i- nstalled	Amount of Oil
Evaporator	50 cc (1.70 fl.oz)
Condenser	30 cc (1.02 fl.oz)
Receiver/dryer	30 cc (1.02 fl.oz)
Refrigerant line (One piece)	10 cc (0.34 fl.oz)

For compressor Replacement, subtract the volume of oil drained from the removed compressor from the specified volume, and drain the calculated volume of oil from the new compressor:

The specified volume - volume of removed compressor = volume to drain from the new compressor.

#### MOTICE

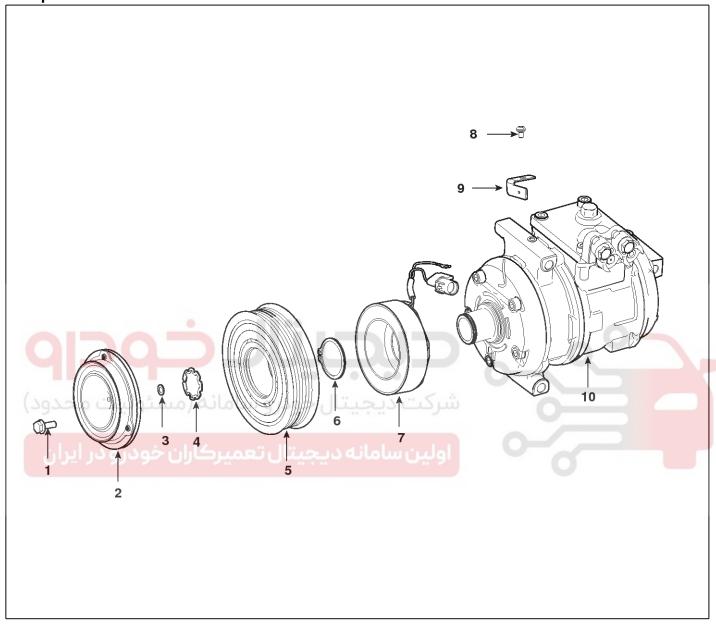

Even if no oil is drained from the removed compressor, don't drain more than 50cc from new compressor.

ولين ساما

**HA-15** 

# Compressor

## Components

SHMHA7007D

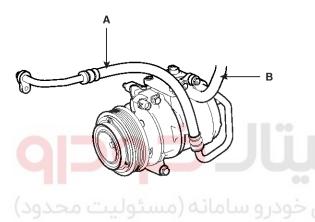

- 1. Bolt
- 2. Disc & Hub assembly
- 3. Shim (Gap washer)
- 4. Retainer ring (pulley)
- 5. Pulley

- 6. Retainer ring (Field coil)
- 7. Field coil
- 8. Screw
- 9. Connector bracket
- 10. Compressor assembly

# Heating, Ventilation, Air Conditioning

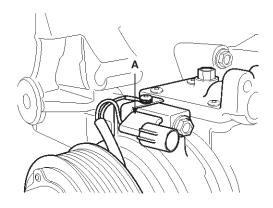

#### Removal

- 1. If the compressor is marginally operable, run the engine at idle speed, and let the air conditioning work for a few minutes, then shut the engine off.
- 2. Disconnect the negative cable from the battery.
- 3. Recover the refrigerant with a recovery/charging station.
- 4. Loosen the drive belt.
- 5. Remove the bolts, then disconnect the suction line (A) and discharge line (B) from the compressor. Plug (C) or cap the lines immediately after disconnecting them to avoid moisture and dust contamination.

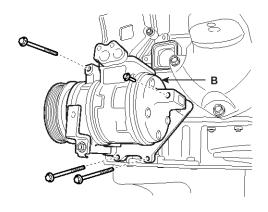

SHMHA7008F

6. Disconnect the compressor clutch connector (A), and then remove 4 mounting bolts and the compressor.

SHMHA7009D

SHMHA7087D

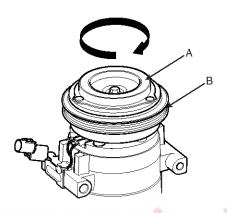

#### Installation

- 1. Make sure of the length of compressor mounting bolts, and then tighten it  $A \rightarrow B \rightarrow C$  order.
- 2. Install in the reverse order of removal, and note these items.
  - If you're installing a new compressor, drain all the refrigerant oil from the removed compressor, and measure its volume, Subtract the volume of drained oil from 120cc(4.20 oz.) the result is the amount of oil you should drain from the new compressor (through the suction fitting).
  - Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the right O-rings for R-134a to avoid leakage.
  - To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.
  - Immediately after using the oil, replace the cap on the container and seal it to avoid moisture absorption.
  - Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.
  - Adjust the drive belt.
  - Charge the system and test its performance.

## **HA-17**

### Inspection

- 1. Check the plated parts of the disc & hub assembly (A) for color changes, peeling or other damage. If there is damage, replace the clutch set.
- 2. Check the pulley (B) bearing play and drag by rotating the pulley by hand. Replace the clutch set with a new one if it is noisy or has excessive play/drag.

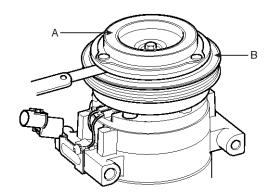

3. Measure the clearance between the pulley (B) and disc & hub assembly (A) all the way around. If the clearance is not within specified limits, remove the disc & hub assembly and add or remove shim (gap washer) as needed to increase or decrease clearance.

Clearance:  $0.45 \pm 0.1$ mm ( $0.018 \pm 0.004$  in.)

#### MNOTICE

The shims (gap washers) are available in seven thicknesses: 0.7mm, 0.8mm, 0.9mm, 1.1mm, 1.2mm and 1.3mm.

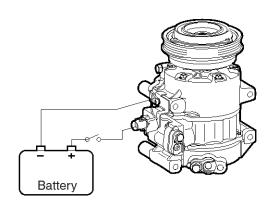

AQJF106B

4. Check operation of the magnetic clutch.

Connect the compressor side terminals to the battery (+) terminal and the ground battery (-) terminal to the compressor body.

Check the magnetic clutch operating noise to determine the condition.

AQJF106C

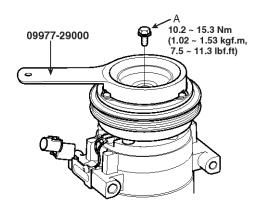

# Heating, Ventilation, Air Conditioning

### Disassembly

1. Remove center bolt (B) while is catching pulley outside order page by special tool (A).

**TORQUE**: 10~15N.m (1.02~1.53kgf.m, 7.37~11lbf.ft)

AQJF106D

2. Remove the disc & hub assembly (A) and shim (gap washer) (B), taking care not to lose the shims. If the clutch needs adjustment, increase or decrease the number and thickness of shims as necessary, then reinstall the disc & hub assembly, and recheck its clearance.

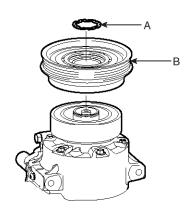

AQJF106E

3. If you removal the field coil, remove retainer ring (A) with retainer ring pliers.

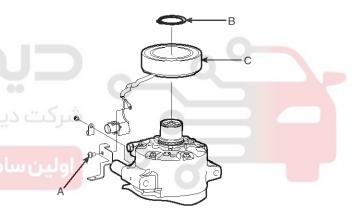

#### MOTICE

- Be careful not to damage the pulley (B) and compressor during removal/installation.
- Once retainer ring (A) is removed, replace it with a new one.

AQJF106F

4. Remove the screw (A) from the field coil ground terminal. Remove the retainer ring (B) and then remove the field coil (C) from the shaft with a puller. Be careful not to damage the coil and compressor.

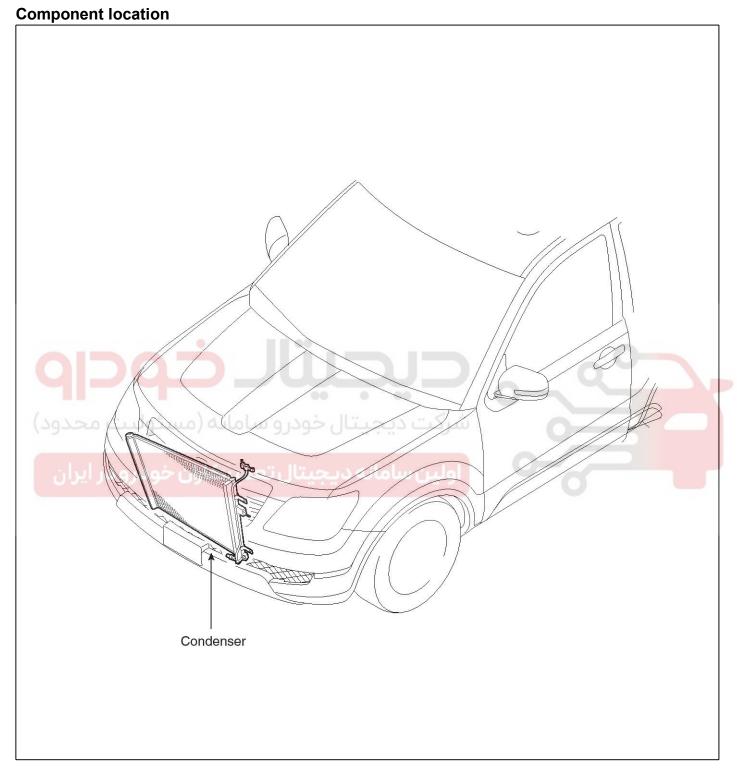

AQJF106G

- 5. Reassemble the compressor clutch in the reverse order of disassembly, and note these items :
  - Clean the pulley and compressor sliding surfaces with non-petroleum solvent.
  - Install new retainer rings, and make sure they are fully seated in the groove.
  - Make sure that the pulley turns smoothly after its reassembled.

**HA-19** 

## Condenser

SHMHA7010L

# Heating, Ventilation, Air Conditioning

#### Inspection

- Check the condenser fins for clogging and damage. If clogged, clean them with water, and blow them with compressed air. If bent, gently bend them using a appropriate tool.
- 2. Check the condenser connections for leakage, and repair or replace it, if required.

### Replacement

- 1. Recover the refrigerant with a recovery/ recycling/ charging station .
- 2. Disconnect the negative (-) battery terminal.
- 3. Remove the front bumper(Refer to BD group-front bumper)
- 4. 4. Remove the radiator assembly(Refer to EM group-radiator)
- 5. Remove the condenser(A) from radiator.

SUNHA6011D

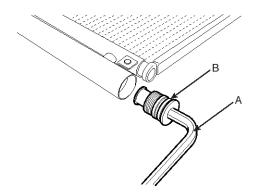

- 6. Install in the reverse order of removal, and note these items :
  - If you're installing a new condenser, add refrigerant oil ND-OIL8.
  - Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the right O-rings for R-134a to avoid leakage.
  - Be careful not to damage the radiator and condenser fins when installing the condenser.
  - Be sure to install the lower mount cushions of condenser securely into the holes.
  - Charge the system, and test its performance.

## **HA-21**

#### **Desiccant**

### Replacement

1. Remove the condenser, and then remove the bottom cap (B) with L wrench (A) from the condenser.

KQRE108D

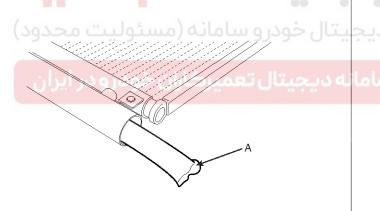

**TORQUE**: 20~25N.m (2.0~2.5kgf•m, 14.5~18.2lb-ft)

2. Remove the desiccant (A) from condenser using a long nose plier. Check for crumbled desiccant and clogged bottom cap filter.

- 3. Apply air conditioning compressor oil along the O-rings and threads of the new bottom cap.
- 4. Insert the new desiccant into the receiver drier tank. The desiccant must be sealed in vacuum before it is exposed to air for use.
- 5. Install the new bottom cap to the condenser.

#### MOTICE

- Always replace the desiccant and bottom cap at the same time.
- Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the right O-rings for R-134a to avoid leakage.
- Be careful not to damage the radiator and condenser fins when installing the condenser.
- Be sure to install the lower mount cushions of condenser securely into the holes.
- Charge the system, and test its performance.

# Heating, Ventilation, Air Conditioning

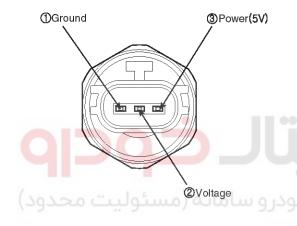

## A/C pressure transducer

### **Description**

A/C pressure transducer convert the pressure value of high pressure line into voltage value after measure it. By converted voltage value, engine ECU controls cooling fan by operating it high speed or low speed. Engine ECU stop the operation of compressor when the temperature of refrigerant line is so high or so low irregularly to optimize air conditioning system.

### Inspection

1. Measure the pressure of high pressure line by voltage output between NO.1 and NO.2 terminals

EQRF116B

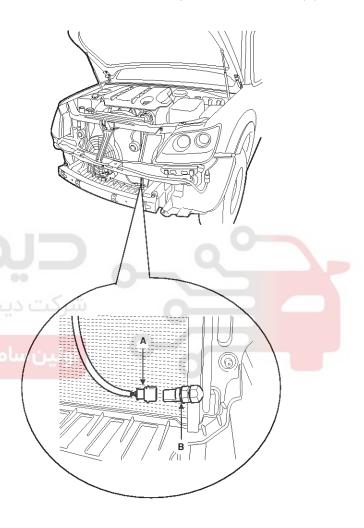

Inspect the voltage value whether it is sufficient to be regular value or not.

**Voltage** = 0.00878835 \* Pressure + 0.37081095 [PSIA]

3. If the measured voltage value is not specification, replace the A/C pressure transducer.

## Replacement

- 1. Disconnect the negative (-) battery terminal.
- 2. Recover the refrigerant with a recovery/charging station.
- 3. Disconnect the A/C pressure switch connector (A) and then remove the A/C pressure transducer (B).

SHMHA7014D

## **⚠**CAUTION

Take care that liquid & suction pipe are not bent.

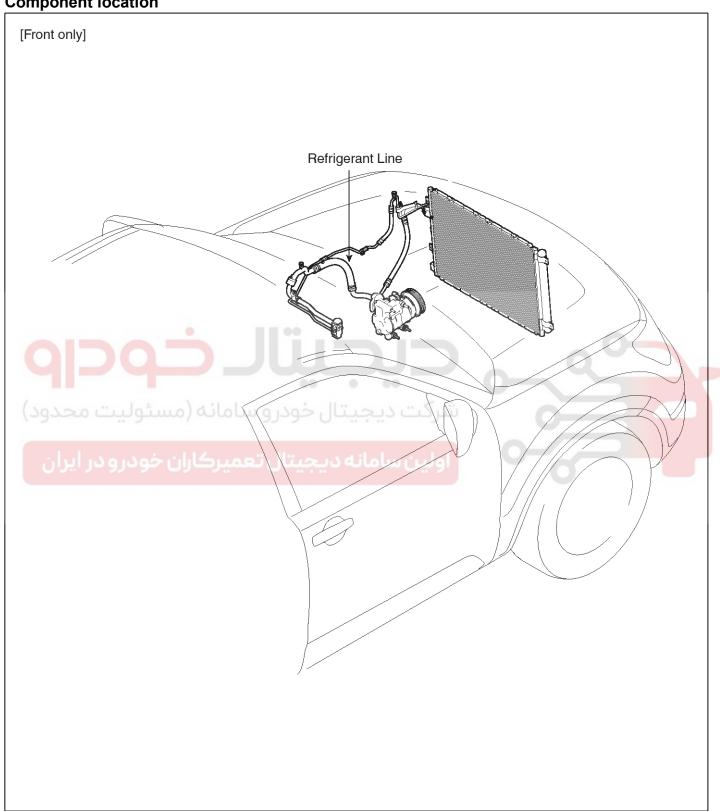

4. Installation is the reverse order of removal.

**TORQUE:** 10~12N.m (1.0~1.2kgf.m, 7.4~8.8lbf.ft)

## **Evaporator temperature sensor**

### **Description**

The evaporator temperature sensor will detect the evaporator core temperature and interrupt compressor relay power in order to prevent evaporator freezing by excessive cooling.

### Inspection

- 1. Ignition "OFF"
- 2. Disconnect evaporator temperature sensor.
- 3. Using the multi-tester, Measure resistance between terminal "1" and "2" of evaporator temperature sensor.

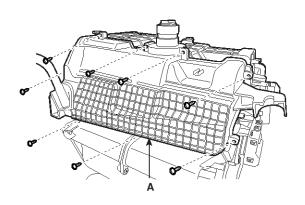

### **Specification**

Temperature [℃]	Resistance [KΩ]
-20	70.04
-10	43.35
0	27.62
10	18.07
20	12.11
30	8.30
سئوليت40مدود)	ال خودر 5.81عانه (م
50	4.15

- 4. If the measured resistance is not specification, substitute with a known-good evaporator temperature sensor and check for proper operation.
- 5. If the problem is corrected, replace the evaporator temperature sensor.

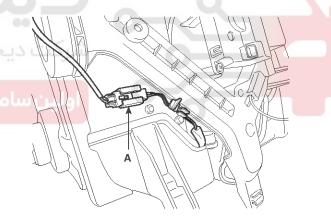

### Replacement

- 1. Disconnect the negative (-) battery terminal.
- 2. Remove the crash pad(refer to BD group-crashpad).
- 3. Remove the heater unit lower cover(A).

SHMHA7015D

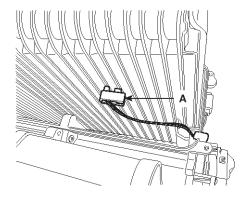

4. Disconnect the evaporator sensor connector(A).

SHMHA7016D

**HA-27** 

5. Remove the evaporator sensor(A) from evaporator core

SHMHA7017D

## **A**CAUTION

Take care that evaporator core pins are not bent.

6. Installation is the reverse order of removal.

# Heating, Ventilation, Air Conditioning

#### In-car sensor

### **Description**

- 1. In-car air temperature sensor is located at the center facia lower panel.
- 2. The sensor contains a thermistor which measures the temperature of the inside. The signal decided by the resistance value which changes in accordance with perceived inside temperature, is delivered to heater control unit and according to this signal the control unit regulates incar temperature to intended value.

### Inspection

- 1. Ignition "ON"
- 2. Blow air with changing temperature to the in car sensor air inlet. Measure sensor resistance between 2 and 4 terminals

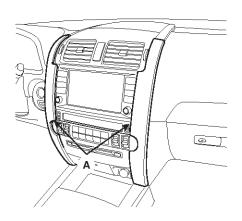

Temperature [°C(°F)]	Resistance between ter- minals 2and 4 ( <sup>kΩ</sup> )
-20(-4)	290.21
-10(14)	165.6
0 (32)	97.83
10(50)	ال خودر 59.67 مانه (م
20(68)	37.48
30(86)	د حمة ال 24.17 مير كارارا
40(104)	115.98
50(122)	10.81

#### MOTICE

In car sensor is negative type thermistor that resistance will rise with lower temperature, and reduce with higher temperature.

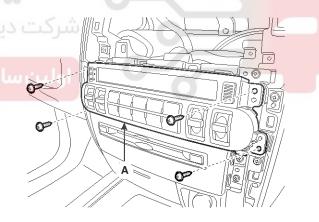

### Replacement

- 1. Disconnect the negative (-) battery terminal.
- 2. Remove the center facia panel(A).

SHMBD8096D

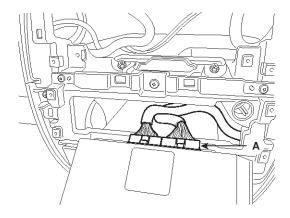

- 3. Remove the audio assembly(refer to BD group-crash pad)
- 4. Loosen the heater controller(A) mounting screw.

SHMHA7019D

5. Disconnect the heater controller connector(A) and then remove heater controller.

**HA-29** 

SHMHA7020D

6. Disconnect the connector of in-car sensor. Loosen the mounting 2 screws and then remove the in-car sensor (B).

SHMHA7021D

7. Installation is the reverse order of removal.

# Heating, Ventilation, Air Conditioning

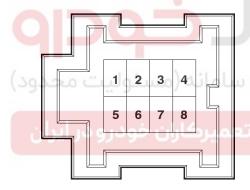

### Photo sensor

### **Description**

- 1. The photo sensor is located at the right of defrost nozzle.
- 2. The photo sensor contains a photovoltaic (sensitive to sunlight) diode. The solar radiation received by its light receiving portion, generates an electromotive force in proportion to the amount of radiation received which is transferred to the automatic temperature control module so that the solar radiation compensation will be performed.

### Inspection

- 1. Ignition "ON"
- 2. Using the scan tool.
- 3. Emit intensive light toward photo sensor using a lamp, and check the output voltage change.
- 4. 4. The voltage will rise with higher intensive light and reduce with lower intensive light.

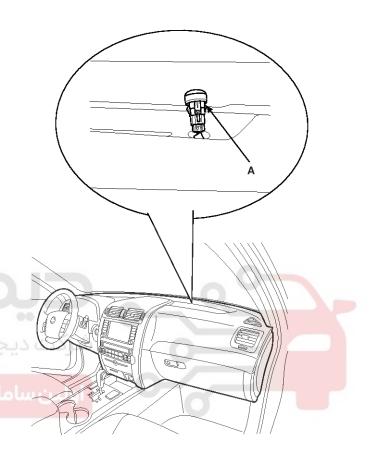

- 1. Sensor GND
  - 5. Photo Sensor (+)
- 2. Sensor Power (+5V)
  - 6. Photo Sensor (-)
- 3. Signal

SHMHA7100L

### Replacement

- 1. Disconnect the negative (-) battery terminal.
- 2. With the (-) driver, remove the photo sensor (A) from the center of defrost nozzle.

SHMHA7022D

3. Install in the reverse order of removal.

HA-31

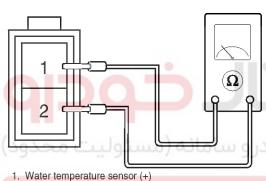

## Water temperature sensor

### **Description**

- 1. Water temperature sensor is located at the heater unit.
- 2. It detects coolant temperature. Its signal is used for cold engine lockout control. When the driver operates the heater before the engine is warmed up, the signal from sensor causes the heater control unit to reduce blower motor speed until coolant temperature reaches the threshold value.

#### Inspection

- 1. Ignition "ON"
- 2. Using the multi-tester, Measure resistance between terminal "1" and "2" of water temperature sensor.

2. Sensor GND (-)

SHMHA8637L

### **Specification**

Coolant temperature [°C(	Resistance ( <sup>k</sup> Ω)
-10(14)	55.85
0(32)	32.91
10(50)	19.99
20(68)	12.51
30(86)	8.047
40(104)	5.311
50(122)	3.588
60(140)	2.476
70(158)	1.742
80(176)	1.246

- 3. If the measured resistance is not specification, substitute with a known-good water temperature sensor and check for proper operation.
- 4. If the problem is corrected, replace the water temperature sensor.

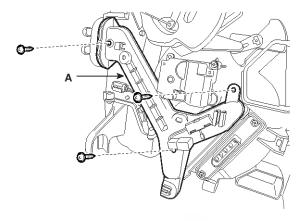

### MOTICE

Negative type thermistor that resistance will rise with lower temperature, and reduce with higher temperature.

# Heating, Ventilation, Air Conditioning

### Replacement

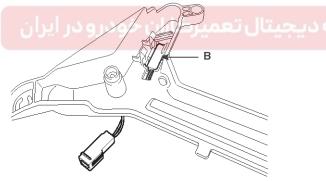

- 1. Disconnect the negative (-) battery terminal.
- 2. Remove the crash pad(refer to BD group-crash pad)
- 3. Remove the heater unit(refer to HA group-heater unit)
- 4. Loosen the heater core cover mount screw and then heater core cover(A).

SHMHA7023D

5. Disconnect the water temperature sensor(B) from heater core cover.

SHMHA7024L

6. Installation is the reverse order of removal.

#### MOTICE

Take care that wire of water temperature sensor is not to be damaged.

**HA-33** 

### **Ambient sensor**

### **Description**

- The ambient temperature sensor is located at the front of the condenser and detects ambient air temperature. It is a negative type thermistor; resistance will increase with lower temperature, and decrease with higher temperatures.
- The sensor output will be used for discharge temperature control, temperature regulation door control, blower motor level control, mix mode control and in-car humidity control.

#### MOTICE

If the ambient temperature is below  $2.0^{\circ}$ C (35.6°F), the A/C compressor will be stopped.

The compressor will be operated by manual operating.

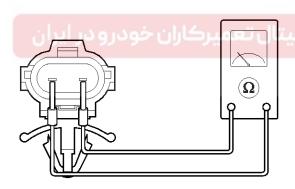

## Inspection

- 1. Ignition "OFF".
- 2. Disconnect ambient temperature sensor.
- 3. Check the resistance of ambient temperature sensor between terminals 1 and 2 whether it is changed by changing of the ambient temperature.

### **Specification**

Ambient temperature [°ℂ(°)	Resistance between ter- minals 1and 2 ( <sup>kΩ</sup> )
-30(-22)	479.22
-20(-4)	271.45
-10(14)	158.32
0 (32)	95.10
10 (50)	58.76
20 (68)	37.30
30(86)	24.27
40(104)	16.17
50(122)	11.00

- 4. If the measured resistance is not specification, substitute with a known-good ambient temperature sensor and check for proper operation.
- 5. If the problem is corrected, replace the ambient temperature sensor.

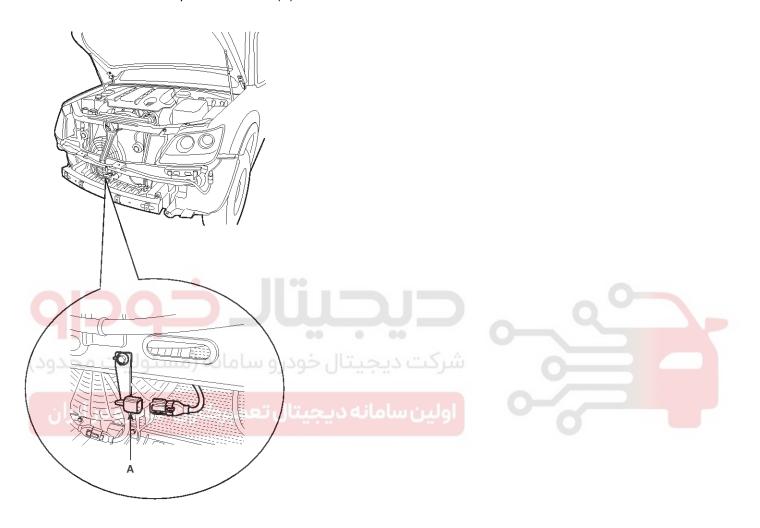

AQJF204B

# Heating, Ventilation, Air Conditioning

### Replacement

- 1. Disconnect the negative (-) battery terminal.
- 2. Remove the front bumper. (Refer to BD group-front bumper)
- 3. Remove the ambient temperature sensor (A).

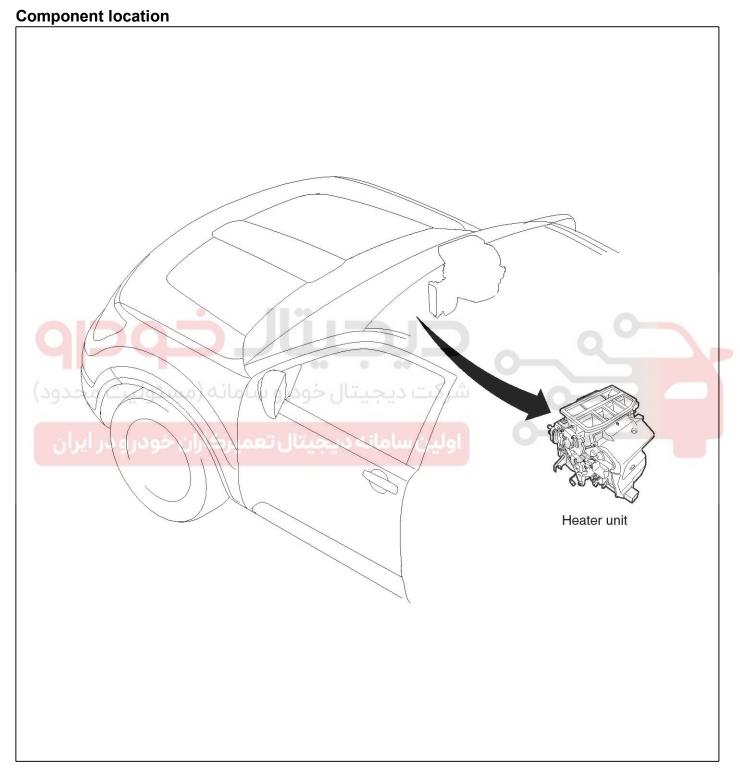

SHMHA7026D

4. Installation is the reverse order of removal.

Heater HA-35

- 15. Shower duct(RH)
- 16. Drain hose
- 17. Temp control actuator
- 18. U nut
- 19. Cap

# Heating, Ventilation, Air Conditioning

### Replacement

- 1. Disconnect the negative (-) battery terminal.
- 2. Recover the refrigerant with a recovery/ recycling/ charging station.
- 3. When the engine is cool, drain the engine coolant from the radiator.
- 4. Remove the bolts (A) and the expansion valve (B) from the evaporator core.

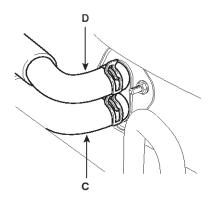

Plug or cap the lines immediately after disconnecting them to avoid moisture and dust contamination.

**Torques :** 7.84  $\sim$  11.7 N.m (0.8  $\sim$  12.2 kgf.m, 5.7  $\sim$  8.6 lb-ft)

SHMHA7030D

Disconnect the inlet (C) and outlet (D) heater hoses from the heater unit.

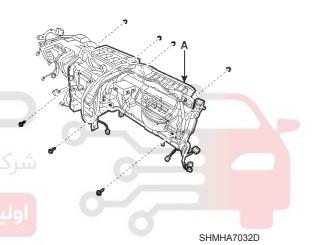

SHMHA7031D

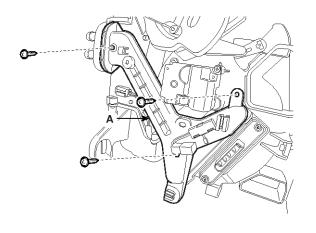

#### 

Engine coolant will run out when the hoses are disconnected; drain it into a clean drip pan. Be sure not to let coolant spill on electrical parts or painted surfaces. If any coolant spills, rinse it off immediately.

- 6. Remove the crash pad (Refer to BD group-crash pad).
- 7. Remove the cowl cross bar assembly. (Refer to BD group-cowl cross bar)
- 8. Disconnect the connectors from the temperature control actuator, the mode control actuator and the evaporator temperature sensor.
- 9. Remove the heater & blower unit after loosening 3 mounting nuts.

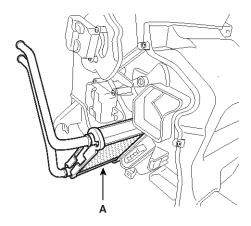

10. Remove the heater core cover(A).

SHMHA7033D

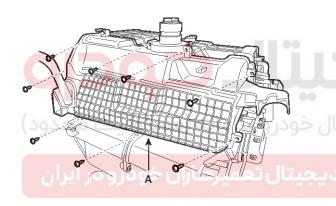

Heater HA-39

11. Remove the heater core(A) from heater unit.

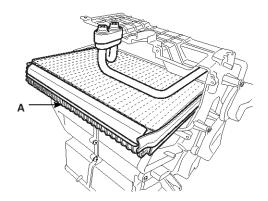

SHMHA7034D

12. Loosen the heater unit lower case mount screw and then remove the heater unit lower case(A).

SHMHA7035D

13. Remove the evaporator core(A).

SHMHA7036D

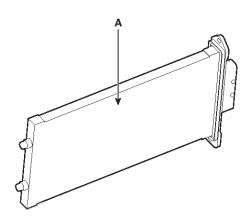

- 14. Be careful that the inlet and outlet pipe are not bent during heater core removal, and pull out the heater core.
- 15. Install the heater core in the reverse order of removal.
- 16. Installation is the reverse order of removal, and note these items :
  - If you're installing a new evaporator, add refrigerant oil (ND-OIL8).
  - Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the right O-rings for R-134a to avoid leakage.
  - Immediately after using the oil, replace the cap on the container, and seal it to avoid moisture absorption.
  - Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.
  - Apply sealant to the grommets.
  - Make sure that there is no air leakage.
  - Charge the system and test its performance.
  - Do not interchange the inlet and outlet heater hoses and install the hose clamps securely.
  - Refill the cooling system with engine coolant.

## Heating, Ventilation, Air Conditioning

### Positive Temperature coefficient)heater

### **Description**

PTC (Positive Temperature Coefficient) heater (A) is an electric heater using a PTC element as an auxiliary heating device that supplements deficiency of interior heat source in highly effective diesel engine (U engine).

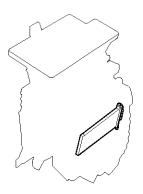

SHMHA8638I

An electric heater heats up the interior by directly heating the air that passes through the heater.

PTC = positive Temperature Coefficient

The name itself implies that the element has a proportional resistance change sensitive to temperature. PTC heater is installed at the exit or the backside of heater core

AQJF301A

#### Operation principle

ECM outputs a PTC on signal. Operate PTC from 1st setting to 3rd setting with an interval of 15 seconds. Heat up the air, which passes through a heater core.

#### (Connector Spec)

PIN	WIRE	COLOR	FUNCTION
E1	4.0	ı	PTC RLY 2
E2	5.0	ı	GND
E3	4.0	ı	PTC RLY 1
E4	5.0	_	GND
E5	4.0	ı	PTC RLY 3

STQHA7143D

#### **Operation condition**

Judge the condition by ambient temperature is below 5°C, coolant temperature is below 70°C, and battery voltage is above 11V and engine RPM is above 700RPM.

Heater HA-41

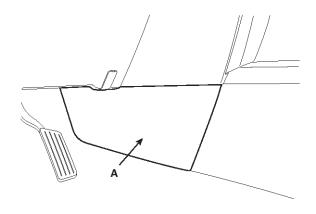

#### Inspection

Inspect the PTC operation by confirmation logic as below.

- 1. Entering method
  - 1) Set the floor mode, maximum heating
  - 2) Turn off the blower switch
  - 3) Press the intake button more than 5 times
  - Indicator of entire button is flashed with an interval of 0.5 seconds continuously (Manual).
     Graphics of the entire LCD display switch on and off with an interval of 0.5 seconds continuously (Automatic)
  - 5) Confirm the PTC operation by operating the blower switch
    - Manual: 1~8 step, Automatic: 1~8step.
  - 6) Each PTC relay is operated with an interval of 3 seconds.
  - 7) Execute the PTC operation by confirmation logic for 30 seconds.
- 2. Cancellation method.
  - 1) Select the A/C button or intake button.
  - 2) IG "OFF".
  - 3) Cancel the logic after 30 seconds automatically.
- If the PTC operation is not operated, substitute with a known-good PTC and check for proper operation.
   If the problem is corrected, replace the PTC.

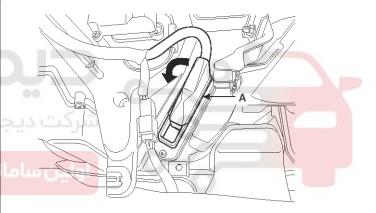

#### Replacement

1. Remove the crash pad lower panel(A).

SHMHA7037D

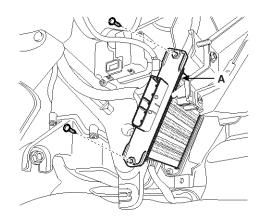

2. Disconnect the PTC heater connector (A).

SHMHA7038D

# Heating, Ventilation, Air Conditioning

3. After loosening the mounting bolts, then remove the PTC heater (A).

SHMHA7039D

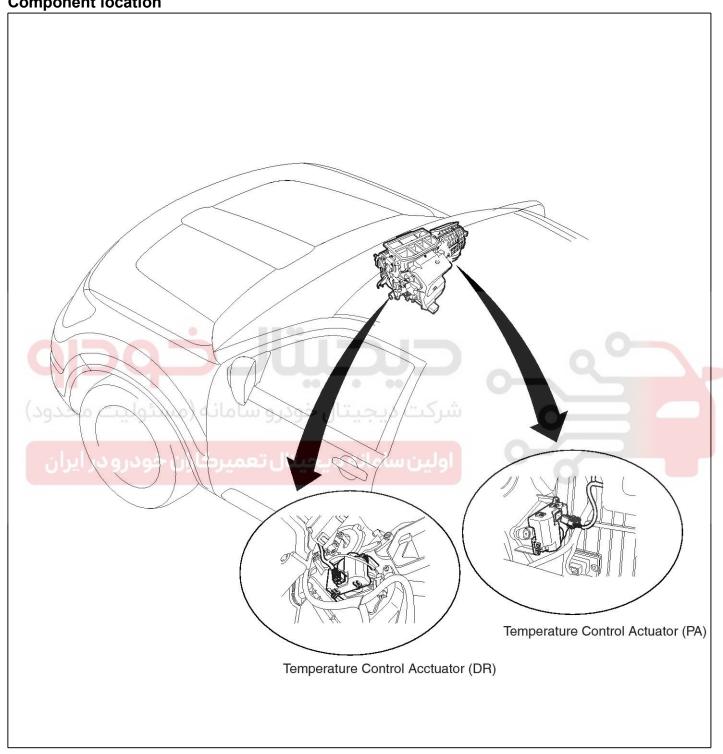

Heater **HA-43** 

### **Temperature Control Actuator**

**Component location** 

SHMHA7040L

## Heating, Ventilation, Air Conditioning

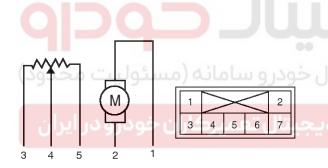

#### **Description**

- 1. Heater unit includes mode control actuator and temperature control actuator.
- 2. Temperature control actuator is located at the heater unit. It regulates the temperature by the procedure as follows. Signal from control unit adjusts position of temperature door by operating temperature switch and then temperature will be regulated by the hot/cold air ratio decided by position of temperature door.

### Inspection

- 1. Ignition "OFF"
- 2. Disconnect the connector of temperature control actuator.
- 3. Verify that the temperature control actuator operates to the hot position when connecting 12V to the terminal 1 and grounding terminal 2.
  - Verify that the temperature control actuator operates to the cool position when connecting in the reverse.

### [Drive]

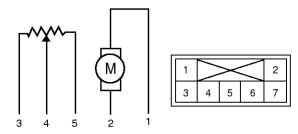

- 1. Hot position
- 2. Cool position
- 3.5V (Vcc)
- 4. Feedback signal
- 5. Sensor ground

SHMHA7104L

### Specification

Door position	Voltage(4-5)	Error detecting
Max. cooling	0.3 ± 0.15V	Low voltage :0.1 V or less
Max. heating	4.7 ± 0.15V	High voltage :4.9 V or more

#### [Passenger]

- 1. Hot position
- 2. Cool position
- 3. Sensor ground
- 4. Feedback signal
- 5. 5V (Vcc)

SHMHA7105L

- 4. Check the voltage between terminals 7 and 7(Drive).
- 5. Check the voltage between terminals 5 and 6(Passenger).

### **Specification**

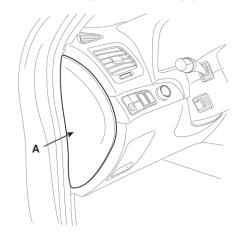

Door position	Voltage(3-4)	Error detecting	
Max. cooling	0.3 ± 0.15V	Low voltage :0.1  V or less	
Max. heating	4.7 ± 0.15V	High voltage :4.9 V or more	

- It will feedback current position of actuator to controls.
- 6. If the measured voltage is not specification, substitute with a known-good temperature control actuator and check for proper operation.
- 7. If the problem is corrected, replace the temperature control actuator.

Heater HA-45

### Replacement

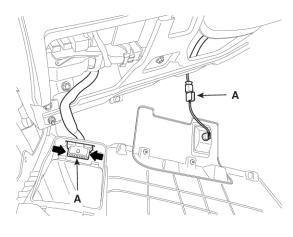

- 1. Disconnect the negative (-) battery terminal.
- 2. Remove the crash pad side cover (A).

SHMHA7041D

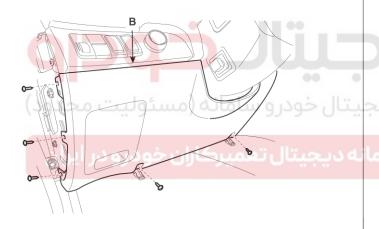

3. Remove the crash pad lower cover(B).

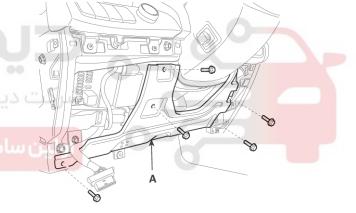

SHMBD8085D

5. After loosening the mounting bolts, then remove the reinforcing panel (A).

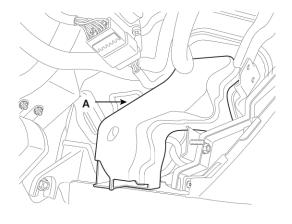

SHMBD8084D

SHMHA7043D

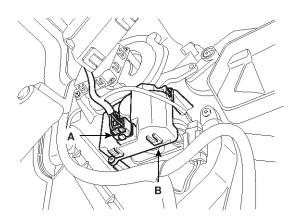

6. Loosen the mounting screw and then remove the duct assembly (A).

SHMHA7044D

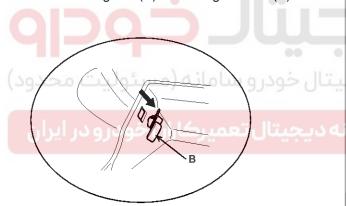

# Heating, Ventilation, Air Conditioning

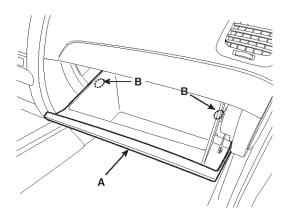

- 7. Remove the BCM(refer to BE group-BCM).
- 8. Disconnect the temperature control actuator connector (A).
- 9. Loosen the mounting screw and then remove the temperature control actuator (B).

SHMHA7045D

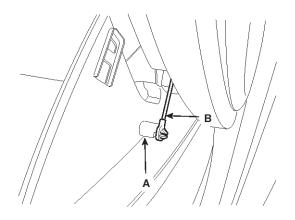

10. Disconnect the guide (B) from the glove box (A).

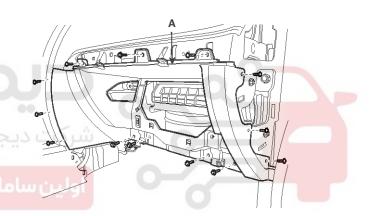

SHMBD8110D

11. Remove the side damper (A) from the glove box (B).

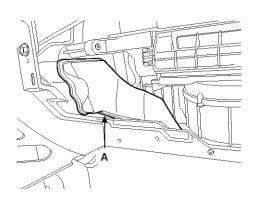

SHMBD8111D

12. After loosening the mounting screws and bolts, then remove the glove box housing (A).

### **Mode Control Actuator**

**Component Location** 

SHMHA7049L

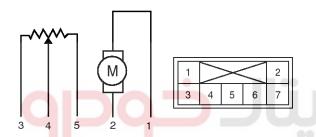

Heater HA-49

#### **Description**

The mode control actuator is located at the heater unit.It adjusts position of mode door by operating mode control actuator based on signal of A/C control unit. Pressing mode select switch makes the mode control actuator shift in order of vent $\rightarrow$  B/L  $\rightarrow$  floor  $\rightarrow$  mix.

#### Inspection

- 1. Ignition "OFF"
- 2. Disconnect the connector of mode control actuator.
- 3. Verify that the mode control actuator operates to the defrost mode when connecting 12V to the terminal 1 and grounding terminal 2.
- 4. Verify that the mode control actuator operates to the vent mode when connecting in the reverse.

- 1. Vent mode
- 4. Feedback signal
- 2. Defrost mode 5. Sensor ground
- 3.5V(Vcc)

SHMHA7106L

5. Check the voltage between terminals 4 and 5.

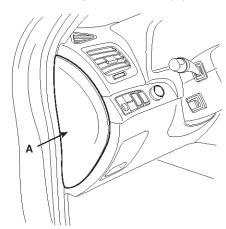

Door position	Voltage (4-5)	Error detecting
Vent	0.3 ± 0.15V	Low voltage :0.1 V or less
Defrost	4.7 ± 0.15V	High voltage :4.9 V or more

It will feedback current position of actuator to controls.

- 6. If the measured voltage is not specification, substitute with a known-good mode control actuator and check for proper operation.
- 7. If the problem is corrected, replace the mode control actuator.

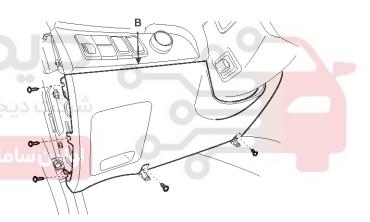

#### Replacement

- 1. Disconnect the negative (-) battery terminal.
- 2. Remove the crash pad side cover(A).

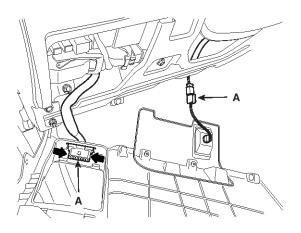

SHMHA7041D

3. Remove the crush pad lower cover(A).

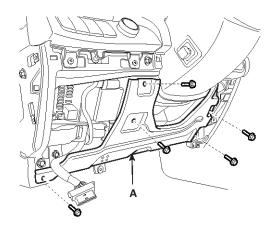

SHMBD8084D

SHMBD8085D

# Heating, Ventilation, Air Conditioning

4. After loosening the mounting bolts, then remove the reinforcing panel (A).

SHMHA7043D

- 5. Remove the BCM(refer to BE group-BCM)
- 6. Disconnect the mode control actuator connector (A) after removing the air duct.
- 7. Loosen the mounting screws and then remove the mode control actuator (B).

### Climate control air filter

### **Description**

This has particle filter which eliminates foreign materials and odor. The particle filter includes odor filter as well as conventional dust filter to ensure comfortable interior environment.

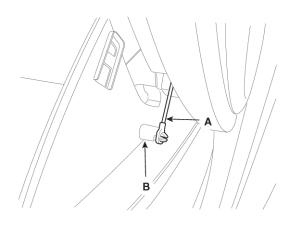

### Replacement

1. Open the glove box (A). Lower the glove box down completely by removing the glove box stopper (B) to the glove box.

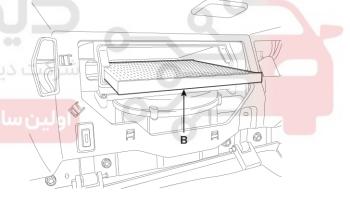

SHMBD8110D

2. Remove the side damper (A) from the glove box (B).

SHMHA7060L

- 3. Remove the filter cover with pushing the knob.
- 4. Replace the air filter (B), install it after making sure of the direction of air filter.

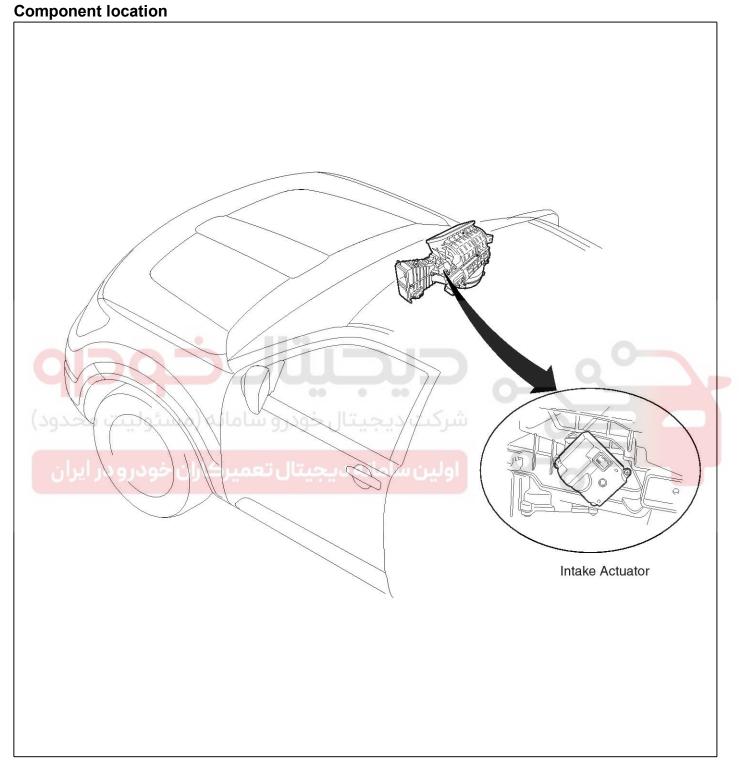

SHMHA7061D

#### MOTICE

In case of driving in an air-polluted area or rugged terrain, check and replace the air filter as frequently as possible. Blower HA-57

### **Intake Actuator**

SHMHA7062L

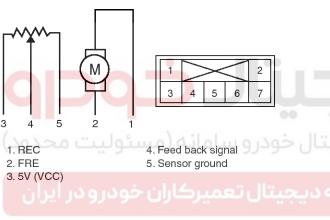

## Heating, Ventilation, Air Conditioning

#### **Description**

- 1. The intake actuator is located at the blower unit.
- 2. It regulates the intake door by signal from control unit.
- 3. Pressing the intake selection switch will shift between recirculation and fresh air modes.

#### Inspection

- 1. Ignition "OFF"
- 2. Disconnect the intake actuator connector.
- 3. Verify that the actuator operates to the recirculation position when connecting 12V to the terminal 1 and grounding terminal 2.
- 4. Verify that the intake actuator operates to the fresh position when connecting in the reverse.

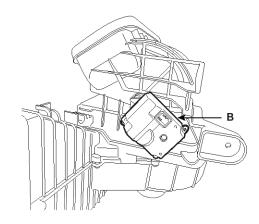

SHMHA7107L

- 5. If the intake actuator is not operated well, substitute with a known-good intake actuator and check for proper operation.
- 6. If the problem is corrected, replace the intake actuator.

#### Replacement

- 1. Disconnect the negative (-) battery terminal.
- 2. Remove the glove box (Refer to BD group-crash pad).
- 3. Disconnect the intake actuator connector.
- 4. Loosen the mounting screw and then remove the intake actuator (B) from the blower unit.

# Heating, Ventilation, Air Conditioning

### Replacement

- 1. Disconnect the negative (-) battery terminal.
- 2. Remove the rear console panel(A).

SHMBD8067D

3. Loosen the mount screw and then remove the rear

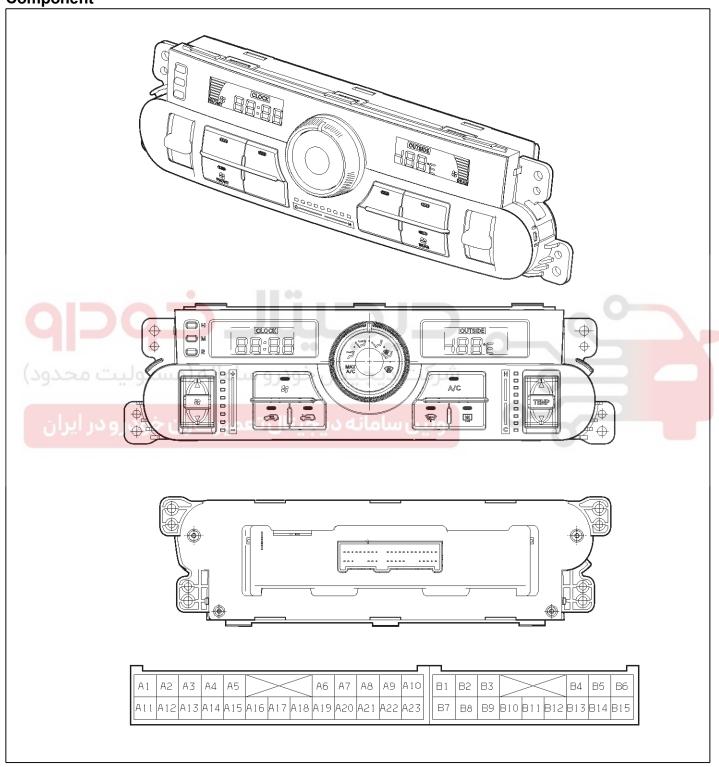

SHMBD8068D

Controller HA-71

## Heating, Ventilation, Air Conditioning

#### **SELF-DIAGNOSIS**

1. Self-diagnosis process

The F.A.T.C. module self test feature will detect electrical malfunction and provide error codes for system components with suspected failures.

LQJF500E

#### MOTICE

DTC data can be retrieved from the control panel directly or from the DLC using the Hi-Scan Pro.

Controller HA-77

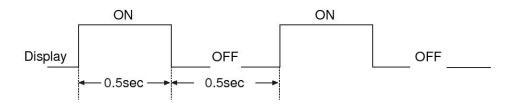

2. How to read self-diagnostic code

After the display panel flickers three times every 0.5 second, the corresponding fault code flickers on the setup temperature display panel every 0.5 second and will show two figures. Codes are displayed in numerical format.

Display	Fail description		
00	Normal		
11	In-car sensor open		
12	In-car sensor short		
13	Ambient sensor open		
14	Ambient sensor short		
15	Water temp sensor open		
16	Water temp sensor short		
17	Evaporator sensor open		
18	Evaporator sensor short		
19	Temp door potentiometer open/short- Drive		
20	Temp door potentiometer fault- Drive		
21	Mode door potentiometer open/short – Passenger		
22	Mode door potentiometer fault – Passenger		
25	Intake door potentiometer open		
26	Intake door potentiometer short		
32	Temp door potentiometer open/short - Passenger		
33	Temp door potentiometer fault - Passenger		

# Heating, Ventilation, Air Conditioning

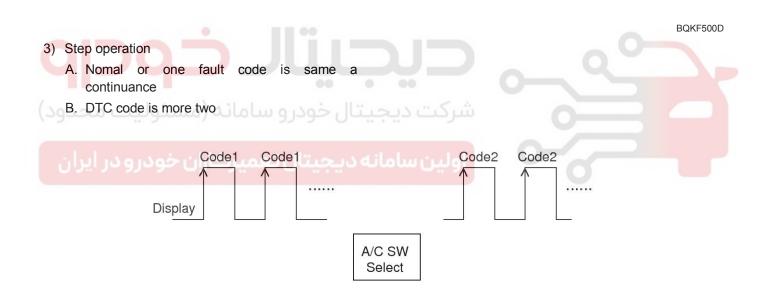

- 3. Fault code display
  - 1) Continuance operation: DTC code is one

BQKF500C

2) Continuance operation : DTC code is more two

BQKF500E

4. If fault codes are displayed during the check, Inspect malfunction causes by referring to fault codes.

Controller HA-79

#### 5. Fail safe

- In-car temperature sensor: Control with the value of 25°C (77°F)
- 2) Ambient temperature sensor: Control with the value of 20°C (67°F)
- 3) Evaporator temperature sensor: Control with the value of -2°C (28.4°F)
- 4) Temperature control actuator (Air mix potentiometer):
  - If temperature setting  $17^{\circ}\text{C-}24.5^{\circ}\text{C}$ , fix at maximum cooling position.
  - If temperature setting 25°C-32°C, fix at maximum heating position
- 5) Mode control actuator (Direction potentiometer): Fix vent position, while selecting vent mode. Fix defrost position, while selecting all except vent mode.
- 6) Intake control actuator:

Fix fresh position, while selecting fresh mode.

Fix recirculation position, while selecting recirculation mode.

شرکت دیجیتال خودرو سامانه (مسئولیت محدود)

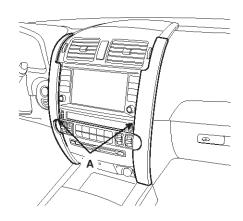

اولین سامانه دیجیتال تعمیرکاران خودرو در ایران

# Heating, Ventilation, Air Conditioning

### Replacement

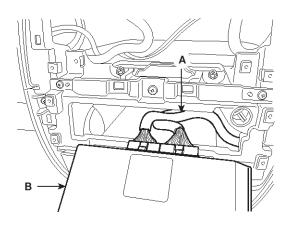

- 1. Disconnect the negative (-) battery terminal.
- 2. Remove the center fascia panel (A).

SHMBD8096D

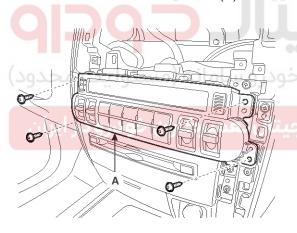

- Remove the audio assembly(refer to BD group-crash pad)
- 4. Loosen the heater & A/C controller (A) mount screws.

SHMHA7086D

6. Installation is the reverse order of removal.

SHMHA7019D
